Past performance is not indicative of future results and yields may vary.

(1) The current yield, which is also known as the current annualized yield or current seven-day yield, represents the net change, exclusive of capital changes and income other than investment income, in the value of a hypothetical account with a balance of one share (normally \$1.00 per share) over a seven-day base period expressed as a percentage of the value of one share at the beginning of the seven-day period. This resulting net change in account value is then annualized by multiplying it by 365 and dividing the result by 7. The yields shown may reflect fee waivers by service providers that subsidize and reduce the total operating expenses of the TexasDAILY portfolio. Portfolio yields would be lower if there were no such waivers. The allocation factor represents the daily net income dividend declared by the TexasDAILY portfolio divided by the portfolio's daily net assets. The one-day yield represents the allocation factor of the TexasDAILY portfolio divided by the daily net asset value per share (normally \$1.00) multiplied by 365. Unlike the current yield—which excludes capital changes and income other than investment income—the allocation factor and one-day yield are inclusive of capital changes and any income other than investment income.

(2) The monthly distribution yield represents the sum of a month's one-day allocation factors divided by the number of days in that month, and multiplied by 365. The yields shown may reflect fee waivers by service providers that subsidize and reduce the total operating expenses of the TexasDAILY portfolio. Portfolio yields would be lower if there were no such waivers.
