7.2.2 If, after termination, it is determined for any reason whatsoever that Contractor was not in default, or that the default was excusable, the rights and obligations of the parties shall be the same as if the termination had been issued for the convenience of the County in accordance with Section 7.1 above.

7.3 Upon termination of this Agreement, County shall compensate Contractor in accordance with Section 3, above, for those services which were provided under this Agreement prior to its termination and which have not been previously invoiced to County. Any proprietary or confidential information marked as such provided to County by Consultant shall not be disclosed to any third party, except as directed by the Texas Attorney General in response to a request for such under the Texas Public Information Act, which provides for notice to the owner of such marked information and the opportunity for the owner of such information to notify the Attorney General of the reasons why such information should not be disclosed.

RE: Proposed Traffic Signal Design
1. Spring Green Boulevard at Roesner Road
2. West Bellfort at Old Richmond Road
3. West Bellfort at Mason Road

Dear Mr. Narayanappa;

Per your recent request, Weisser Engineering Company is pleased to propose the following professional services and related fees for the above-described road intersection:

A. TOPOGRAPHIC SURVEY:

1. Identify relevant topographic information along the intersecting streets. From the nearest edge of the intersecting street, the survey shall extend 300 feet along each leg at the intersections of Spring Green/Roesner and West Bellfort/Old Richmond.
2. Identify relevant topographic information along the intersecting streets. At the intersection of West Bellfort /Mason, from the nearest edge of the intersecting street the survey shall extend 300 feet on each leg of Mason. It shall extend 400 feet on each leg of West Bellfort.
3. Conduct abstract research to the extent necessary to recover original survey corners, rights-of-way (ROW), property corners, etc. and to establish baselines.
4. Set the baseline and station at 100-foot intervals including all PIs, PCs and PTs. Establish project benchmarks as referenced to 2001 adjustments, if within 2000 feet. Where practical, the baseline shall be set along the centerline of the existing ROW or at a convenient offset. This line shall remain on the ground (to be used as construction control).
5. Perform survey to locate existing conditions within existing ROW. As a minimum the survey shall include the locations of all ROW and corner cuts, property fences and walls, subdivision monuments, subdivision landscaping at intersection corners, roadway edges, medians, intersection corners and radii, expansion joints, driveways, sidewalks, ramps, traffic control devices (such as signs, including type and size, and pavement markings), manholes, storm inlets, drainage lines, sewer lines, water lines, fire plugs, power lines and poles, telephone lines and poles, light poles, service poles, gas lines, fiber optic lines, cable lines, monuments, shrubs, trees, etc.
6. Provide elevations based on an assumed benchmark along curb returns and sidewalks at quadrants of the intersection. Provide elevations along the medians located at the intersection.

7. Perform sidewalk and ramp survey to comply with TxDOT design practices and ADA requirements. The sidewalk and ramp survey data will be sufficient for ramp and push button design including (but not limited to):
 - a. Relative elevations, including at least two horizontal and vertical control points for future layout control for construction staking.
 - b. Curb (top back of curb) and gutter (at flow line and at edge) will be collected through the curves with observation every three feet along the arc near existing ramps. Outside existing ramp areas, curb and gutter observations may be every five feet.
 - c. Drainage structures (and any other utility located in or adjacent to the curb and gutter) near existing ADA ramps must be located because they can affect ramp design.
 - d. If ramps exist enough information will be collected to properly define the existing conditions.
 - e. Both ends of existing sidewalk joints will be mapped to determine limits of sidewalk replacement.

Have the lines probed and obtain elevations of all known pipelines and gathering lines that cross the ROW or lie within the project limits. Provide representative names, contact numbers, email addresses and hard copy or PDF of the plans.
