Soils Inspection

Soils Inspection and Testing will be provided in general accordance with the project plans and specifications. The inspection and testing of the storm sewer will include field density testing during embedment and backfilling of the various utilities, manholes, junction boxes, and inlets. The inspection and testing of the borrow and cement stabilized sand subgrade will include field density testing during placement. The inspection and testing of the pavement subgrade will include lime application inspection, field gradations after final mixing of the lime stabilized subgrade, field density testing, and depth checks. Samples to determine moisture density relationships (MDR) and other soil constants will be obtained as required, as will samples to determine cement stabilized sand compressive strength. AEC estimates one hundred twenty-seven (127) trips for inspection and testing and sample pickups.
