

## **DRAINAGE DISTRICT**

Fort Bend County, Texas

### **Monthly Report February 2010**

The removal of vegetation from channels during February 2010 was accomplished by shredding and herbicide applications.

The application of herbicides for the year 2010 growing season began February 25, 2010. The applications were made with tractor-mounted rigs and with truck-mounted computer injected applicators. The primary target was Giant Ragweed, although all actively growing broad leaf annuals were affected. This early season application controls the Ragweed plants in their seedling stage when they are most easily controlled. Later season applications would require higher herbicide rates and increase treatment cost with reduced effectiveness. A total of (12) channels that included Long Point Slough V-A, Rabbs Bayou II-D, County Line Ditch II-VV, and Red Gully II-K-9.

The bridge crew worked on a variety of projects that included repair of watergates and fences on Cedar Creek I-B. Also, throughout the month on days it rained they sanded and re-painted a winch truck and its bed.

The reshaping of the lower portion of Cedar Creek I-B continued with dozers. Several machines including two track excavators and a dozer worked most of the month demolishing an abandoned sewer treatment plant for the City of Richmond.

Work was also done at Dry Creek II-B-2 in George Ranch to remove water lilies. The Link Belt LS308H Dragline and the Case 590 loader was used in this process.

The following charts indicate which projects received work and which equipment was assigned to each during February 2010.
