Includes modifying the Project Fund List form to add columns that show the dollar amounts of funding reserved/consumed for land use. (Global funds will still be encumbered to projects as usual, and no money will be transacted from a project to the ROW module. This will just serve as a way to identify how much of a project's funds are intended for ROW use, track the consumption of those funds, and be able to report on them.)
2	Expenses Form	ROW payments consuming project funds reserved for land use: Auto-creation of expense records in the linked project when a ROW Payment record reaches the end of its workflow.
3	Project Details	Add user-entry text field: TxDOT CSJ No.
4	Contract Details	Change the existing single-select "Prime Contractor" dropdown field to be a picker that draws from the "Contractors" library. The picker will have the following columns: Contractor, Contact, ID, Contract Type, Contractor Type.
5	Contractors	Update the existing "Prime Contractor" and "Sub-Contractors" pickers to include a new column for "Contractor Type" that will pull from the existing "Contractors" library.
6	Purchase Order	Update the existing "Vendor ID" picker to include a new column for "Vendor Type". This column will pull the "Contractor Type" value from the existing "Contractors" library.
7	Ticket #11149	FBC: Contract Line Item
8	Purchase Order workflows	Additional 4 PO workflows based on the PO type needs to be configured. Add a warning message while taking 'Issue PO' workflow action in all workflows to prompt the user to add an attachment. Existing PO and PO revision workflows will be modified to include two additional workflow stages (Stage 5 – Send for signature, Stage 6 – Send Signed Doc). This would allow to send the draft document back to the PO originator for signature. No changes will be carried out with the existing records. Revised workflows will be implemented on new records.

- 6.2 Aurigo will also provide a one-time Masterworks upgrade at no cost to County in accordance with page 10, Section 5 (Masterworks Upgrade) of Exhibit B. This one-time upgrade will be at no cost to the County.

Aurigo's Right of Way Solution

Aurigo's flagship product suite, Aurigo Masterworks Cloud, helps land managers automate the entire land acquisition lifecycle - from project initiation, to planning, to execution, and finally to closeout.

Most capital project management software systems stop with planning and managing projects. Government agencies are forced to look for point solutions that help automate a critical phase in the land acquisition project delivery lifecycle: Right of Way (ROW) management. With the Aurigo Masterworks' Right of Way product, users get a full-blown ROW software system that helps track and manage land parcels, easements, appraisals, assets inspections and land acquisition negotiations. This is all within a single system that has a mapping capability that is integrated with ESRI ArcGIS and will give a visual representation of property assets. Core capabilities include:

- Defining and tracking Land Projects and Parcels
- Defining and tracking multiple interests and agreements within parcel(s)
- Full automation of the eminent domain business process
- Tracking of Cost Estimates, Payments and Claims
- End-to-end GIS Integration, with real-time mapping updates

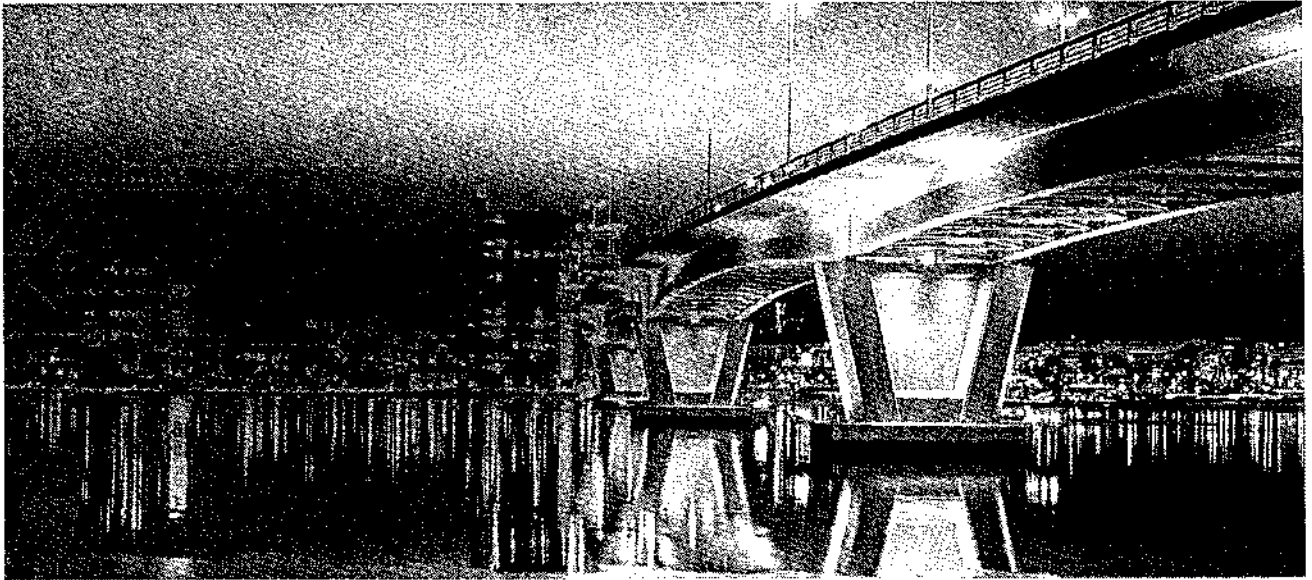

The Right of Way product ensures that customers have a single platform for managing their land and parcel data. They can report on land transaction activities, eliminates labor intensive manual data entry in paper forms and spreadsheets, and receive transaction progress updates without phone calls and meetings.

Benefits

Aurigo's Right of Way product gives you everything you need for data-driven and geo-located planning of Right of Way land acquisition:

- Clearly define project boundaries with geo-tagging and land mapping using ESRI ArcGIS.
- Track approvals for every revision and final approval.
- Eliminate paperwork for surveys and land appraisals, including tracking details of any features on the land.
- Avoid complicated paper trails with configurable templates to create leases and legal documents and maintain approvals digitally.
- Assign appraised value for each parcel of land you need to acquire for each project.
- Manage the complex process to acquire land through deeds, easements, eminent domain, and multiple offers and counteroffers.
- Manage complex and iterative negotiations with landowners while keeping track of every detail for full legal compliance.
- Easily track information with real-time dashboards and reports.

Fort Bend County: Change requests

1 Introduction

1.1 Background

Fort Bend County (FBC) has implemented and currently using the Masterworks Project management system to manage the Projects and Contracts executed by the county. FBC is undergoing Masterworks Right of Way (RoW) management system implementation. During the implementation of the RoW system, the FBC team has identified changes required to the current implementation based on the various workshops. This document compiles multiple changes captured by the Aurigo project team as well as posted through the customer ticketing system into a change request document for approval by FBC and execution of work.

2 Scope of Service for this change request

This change request is to make the following modifications to Masterworks:

Config Item #	Configuration change requested	Configuration change description
1	Tying ROW funds to project funds	Configuring project funds to allow the Land Fund Transaction form in the ROW module to reserve project money to be used specifically for land. Includes modifying the Project Fund List form to add columns that show the dollar amounts of funding reserved/consumed for land use. (Global funds will still be encumbered to projects as usual, and no money will be transacted from a project to the ROW module. This will just serve as a way to identify how much of a project's funds are intended for ROW use, track the consumption of those funds, and be able to report on them.)
2	Expenses Form	ROW payments consuming project funds reserved for land use: Auto-creation of expense records in the linked project when a ROW Payment record reaches the end of its workflow.
3	Project Details	Add user-entry text field: TxDOT CSJ No.
4	Contract Details	Change the existing single-select "Prime Contractor" dropdown field to be a picker that draws from the "Contractors" library. The picker will have the following columns: Contractor, Contact, ID, Contract Type, Contractor Type.
5	Contractors	Update the existing "Prime Contractor" and "Sub-Contractors" pickers to include a new column for "Contractor Type" that will pull from the existing "Contractors" library.

Fort Bend County: Change requests

6	Purchase Order	Update the existing "Vendor ID" picker to include a new column for "Vendor Type". This column will pull the "Contractor Type" value from the existing "Contractors" library.
7	Ticket # 11149	FBC: Contract Line Item
8	Purchase Order workflows	Additional 4 PO workflows based on the PO type needs to be configured. Add a warning message while taking 'Issue PO' workflow action in all workflows to prompt the user to add an attachment. Existing PO and PO revision workflows will be modified to include two additional workflow stages (Stage 5 - Send for signature, Stage 6 - Send Signed Doc). This would allow to send the draft document back to the PO originator for signature. No changes will be carried out with the existing records. Revised workflows will be implemented on new records.

2.1 Schedule

A mutually outlined schedule of delivery for the change request shall be outlined between FBC and Aurigo as soon as the change request is approved.

2.2 Assumptions:

- FBC's personnel will test and accept features part of this change request in the UAT environment.
- After FBC's acceptance, these new features will be moved to the Production environment.

5 Masterworks Upgrade

Aurigo is pleased to offer a one-time Masterworks upgrade at no cost to FBC as part of the ongoing relationship. Aurigo will upgrade FBC Masterworks from their current version to Masterworks 12.2 version. The upgrade exercise will be taken up in Q1 of 2021 after the implementation of the Right of Way management solution is completed.

The upgrade will ensure that FBC's current configurations and or customizations that has been implemented will be ported to the latest version. The upgrade will provide additional functionalities as available out-of-the-box in the system. Any modifications to out-of-the-box configurations are not part of the upgrade scope of work and will have to be taken up through a change request. Upgrade will first be deployed in the UAT environment for FBC. Upon UAT testing and acceptance from FBC, the upgrade will be pushed to Production.

There are no other deliverables part of the upgrade other than the software upgrade.

Upgrade cost of \$65,100 is fully discounted as part of this proposal.

Note: The payment milestones for the change request is not tied to the upgrade. Upgrade will be an independent activity that will happen outside of the scope of this change request.
